

A HIMACS Oasis by Nothingstudio and Hüest at Marbella Design & Art

HIMACS solid surface, shaped by the expert hands of the prestigious interior design agency **Nothingstudio**, will be participating this year in **Marbella Design & Art**, one of Spain's biggest annual contemporary art and design events. From 2 to 12 November, an exciting space designed by Nothingstudio and sponsored by Hüest (a member of Sumeplast) will be treating attendees to a captivating explosion of textures and colours.

Installed on **Stand LD8**, the composition conceived by **Angelina Sanz** (the creative mind behind Nothingstudio), in collaboration with Hüest, has found the perfect connection between nature and technology, establishing a harmonious and highly sensory atmosphere. Based on the concept of "**Oasis**", this space delivers a burst of organic textures and colours, reminiscent of desert dunes enclosed within a mantle of peace and elegance in a wilderness for visitors.

To make this project a reality, the selection of materials was based on a premise of combining craftsmanship, and quality natural materials, with the precision and versatility of HIMACS. The infinite ability to thermoform and mould HIMACS, as well as the wide availability of textures and colours, meant that an amazing production was possible for this project.

HI·MACS

In view of the desert theme of the space, the chosen HIMACS tones feature shades inspired by volcanic rock from the Volcanics range, the elegant hues of Aurora (part of the Marmo Collection) and the magnetic Emerald, from the fantastic, ethereal Lucent range. One of the most distinctive characteristics of the Lucent Collection is its translucence, which lets designers play and experiment with light. Here they have endowed this project with an incomparable immersive, sensory nature.

In keeping with its ongoing commitment to the world of interior design and décor, HIMACS is proud to be a part of the 6th edition of Marbella Design & Art, a trade fair that is consolidating its position as a leading showcase for the most important galleries and designers on the scene today.

For more information about HIMACS at Marbella Design & Art, please visit the Oasis area at the fair and connect with us during this exciting exhibition and celebration of innovation, creativity and excellence in design.

HIMACS Solid Surface

www.lxhausys.com/eu/himacs

HIMACS is a solid surface material that can be moulded into any shape. It is widely used for architectural and interior applications, such as sculptural and high-performance wall cladding or kitchen, bathroom and furniture surfaces, in commercial, residential and public space projects. It is composed of minerals, acrylic and natural pigments that come together to provide a smooth, non-porous and visually seamless surface which meets the highest standards for quality, aesthetics, fabrication, functionality and hygiene – offering many advantages over conventional materials.

HIMACS provides limitless possibilities for surfacing solutions and inspires creative minds from all over the world. **Zaha Hadid, Jean Nouvel, Rafael Moneo, Karim Rashid, Marcel Wanders** and **David Chipperfield**, among others, have completed fabulous projects using HIMACS.

At the forefront of innovation as always, LX Hausys recently introduced two new products. First, **HIMACS Ultra-Thermoforming**, an innovative formula that pushes the boundaries of solid surface shaping to a whole new level, with 30% more thermoplastic capabilities - the biggest innovation in the history of Solid Surface since its inception in 1967. And now, **HIMACS Intense Ultra** combines the characteristics from two disparate worlds: **Intense Colour Technology** and **Ultra-Thermoforming**.

HIMACS uses a simple heating process to give three-dimensional thermoplastic forming capabilities, allows visually seamless designs, offers a virtually limitless range of colours and – for some shades – exhibits a special translucency when exposed to light. Although HIMACS is almost as robust as stone, it can be worked in a similar way as wood: it can be sawn, routed, drilled or sanded.

HIMACS is made using a next-generation technology, the **thermal cure**. The temperature reached during the manufacturing process sets HIMACS apart from other solid surfaces and creates a denser surface that is even sturdier, more homogeneous and more durable, and with better resistance and superior thermoforming results.

HIMACS does not absorb humidity, is highly resistant to stains and is easy to clean, maintain and repair.

Countless internationally recognised certificates attest to the quality of HIMACS in terms of ecological commitment, hygiene and fire resistance – being the first Solid Surface in the market to receive the official **European Technical Approval (ETA) for façades** – for the Alpine White S728 colour.

HIMACS offers a 15-year warranty for products fabricated by a Quality Club Member.

HIMACS. Because Quality Wins.
